

# MY LITTLE MOVIE

inDigiMOB 

## [ Smaller Projects ]

- 1 Download a simple movie-editing APP to your device
- 2 Decide what the different shots will look like by making a storyboard. Pick about six and don't worry about sound
- 3 Export the files onto the computer and upload them to AppBook
- 4 Film each different shot using your device. Try to keep each shot to only 20 seconds
- 5 Arrange the files in the order you like
- 6 Trim each clip to be the right length
- 7 Turn off the audio on the footage and choose music instead
- 8 Make a title
- 9 Save and export!

Make a short movie about your little one using you own device

## what you need

- Personal smart device

*Great Idea*

## tips & ideas

- Have a play with the App before working on it with participants to get to know how it works
- Check out some examples before starting to get inspired. Watch them as a group and talk about which bits people liked and why those bits were good
- Think about trying to have a mixture of different kinds of shots. There might be: close-up of faces; long shots; kids doing activities like drawing; far away action like running; up close action like playing with other kids; a portrait of parents with little ones; outside shots and inside shots
- This can easily be offline if you have already a movie-editing App on your device

## you will learn

- Capturing footage
- Editing movies
- Import/export
- Downloading apps
- Using apps
